Applications

The new IBUC **G** supports multicarrier transmission across the full C-band spectrum and delivers the highest available output power, making it an ideal solution for high data rate multicarrier applications such as maritime, broadband, broadcast and network hubs.

Terrasat's technology uses Gallium Nitride amplifier to enable greater power efficiency which translates to an appreciable reduction in power consumption. Comparing favorably with earlier technology TWTAs, the GaN **IBUC G** delivers maximum linear output power with the reliability of solid state.
