## PMAR-45

### Robust Maritime Stabilization System

The PALS PMAR-45 is a dedicated maritime antenna featuring a robust 3-axis stabilization system. Equipped with integrated GPS, gyro, and high-precision sensors, it automatically compensates for vessel motion in real time, ensuring continuous satellite acquisition and stable communication in the most challenging sea conditions.

### High-Precision Multi-Band Tracking

Designed for Low Ku, Ku, and Ka band operations, the antenna delivers exceptional tracking accuracy. Its advanced conical scan algorithm achieves a pointing precision of 0.2° RMS, while supporting fast multi-satellite switching for flexible and reliable connectivity across different missions and regions.

### Intelligent Signal Lock for Maximum Uptime

The system utilizes intelligent digital finding technology, analyzing the Carrier-to-Noise (C/N) ratio to accurately identify and lock onto the target satellite. This ensures rapid, reliable acquisition and sustained high-performance links, providing guaranteed communication uptime for critical offshore and naval operations.

### Key Features

- Ku and Ka bands available
- Lower Ku & Ku/Ka simultaneous versions optional
- Highly reliable Direct Drive System
- Optional 4G/ 5G/LTE supported modem for load balancing and bonding solutions
- Rapid Blockage Recovery Time
- 3-Axes Stability System
- 4-Axes Tracking System
- Consistently high data rate
- Broad modem connectivity
- Easy installation and retrofit
