PMAR-60

Dynamic Stabilization for Harsh Seas

The PMAR-60 features a 3-axis stabilized platform with integrated gyro and GPS sensors, delivering continuous motion compensation to maintain a stable satellite link in rough seas and adverse weather, ensuring mission-critical connectivity for all maritime operations.

Intelligent Acquisition and Band Agility

Using digital signal analysis, the terminal rapidly locks onto target satellites by evaluating Carrier-to-Noise (C/N) ratios. Supporting both Ku and Ka bands, it enables fast transponder switching and offers the spectral agility needed for varied and evolving mission requirements.

Uninterrupted Connectivity Through Precision Tracking

With an advanced conical scan algorithm achieving 0.2° RMS accuracy, the system ensures precise satellite tracking and swift multi-satellite handovers. This provides seamless, reliable beyond-line-of-sight (BLOS) communications for continuous vessel operations and data exchange.

Key Features

- X, Ku and Ka bands available
- Highly reliable Direct Drive System
- Optional 4G/ 5G/LTE supported modem for load balancing and bonding solutions
- Exceptional tracking accuracy
- Rapid Blockage Recovery Time
- 3-Axes Stability System
- 4-Axes Tracking System
- Consistently high data rate
- Broad modem compatibility
- Easy installation and retrofit
