

SIGHT

When Data Means Control

PALS Environmental Monitoring System, SIGHT, delivers accurate, real-time data 24/7. Monitor critical environmental conditions including temperature, humidity, wind, and fire with precision. With sensitive sensors and an intelligent alarm system, potential issues are identified instantly, allowing immediate action before problems escalate.

Intuitive Interface, Total Visibility

Track data, generate reports, and monitor measurements effortlessly from a centralized dashboard. Incident reporting boosts performance, saves valuable time, and minimizes operator intervention.

Built for Critical Environments

The SIGHT is designed for large and medium-scale system rooms, data centers, telecom base stations, earth station centers, and any facility requiring constant monitoring. The flexible alarm system enables necessary actions from anywhere, identifying breakdowns in an instant. Fully customizable, SIGHT allows you to add or modify alarms for diverse applications.

Key Features

- Suitable for; satellite uplink/downlink stations, VSAT stations, DSNG stations and many others
- Instant alarm/event monitoring and recording
- Wide device driver library Virtualization of multiple M&C systems Same intuitive
- Increased customizability, simplicity and stability
- GUI experience for all operators
- Scalable and modular system architecture
- Extensive interface options
- Easy to troubleshoot system problems
