# PALS®
Communications & Technology

VISION
Monitoring & Controlling Solution
Adaptable to your Uniqiue Needs

VISION

Masking the complexity and integration of control systems is crucial for implementing interface adaptability and steady monitoring and control architecture. The individual system parts required to be accessible through a unified, well-defined interface for command and component status retrieval. Moreover, flexible tools needed to allow efficient access to system logs, scheduled activities, configuration, events, and alarms.

The ultimate solution for satellite, broadcast, telecommunications, and cable network monitoring. Combining performance, versatility, and intuitive operation, it delivers the precision and simplicity needed to optimize your critical systems.
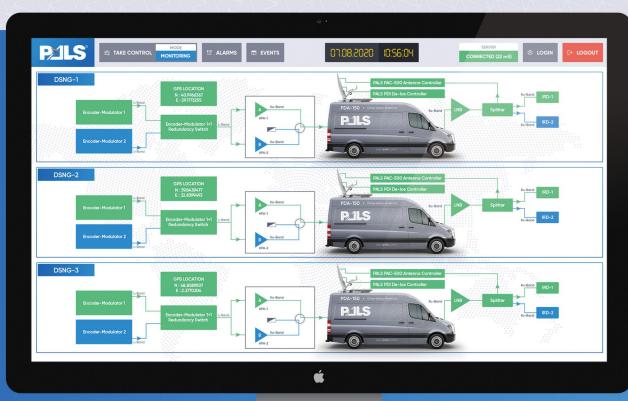

Key Features

➤ Suitable for; satellite uplink/downlink stations, VSAT stations, DSNG stations and many others

➤ Instant alarm/event monitoring and recording

➤ Wide device driver library Virtualization of multiple M&C systems Same intuitive

➤ GUI experience for all operators

➤ Increased customizability, simplicity and stability

➤ Scalable and modular system architecture

➤ Extensive interface options

➤ Easy to troubleshoot system problems

DSNG CONTROLLER
Monitoring & Controlling Solution
Adaptable to your Uniqiue Needs

DSNG CONTROLLER

Satellite News Gathering (SNG) has become indispensable for global broadcasting—enabling live news coverage and real-time event reporting from even the most remote locations worldwide. To guarantee uninterrupted 24/7 news coverage, broadcasters depend on advanced scheduling systems that optimize and remotely manage transmission resources across fully integrated SNG/ENG vehicle fleets.

PALS VISION framework provides user-oriented, personalized views and device drivers tailored to the managed stations' actual framework architecture.

Key Features

➤ Scalable and modular server/client architecture

➤ A user-friendly customized graphical interface

➤ Live status monitoring for all equipment

➤ Password protected user level configuration (admin, operator, guest)

➤ Antenna, Redundancy, Router, Redundancy Control Interface

➤ Visual and audible alarms

➤ Critical commands verification

➤ Custom module development
